DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-47, drawn to searching for (i.e., querying) data stored as a database in a computer or digital data processing system, including sequential searching, primary and secondary index searching, and bit-map searching of inverted lists or topological maps, classified in class 707, subclass 3.
 - II. Claims 48-50, drawn to multicomputer data transfer (i.e. file transfer), classified in class 715, subclass 748.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because a system of performing file transfer instructions and its corresponding failure conditions is **not** required for maintaining a centralized index of documents stored in a plurality of independent document repositories. The subcombination has separate utility such as a file transfer conditional protocol (i.e. if failure, condition to retry transfer at specified time intervals).

Art Unit: 2176

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
